Art Unit 1713

1. Applicants have elected Group I, claims 1-15 for prosecution in this application. Applicants have further traversed the restriction requirement with respect to Group II, claims 16-18, which applicants state are of the same special technical feature as Group I. This argument has been considered but not found persuasive insofar as Groups I and II each represent mutually exclusive structures of polymers. Group I requires a silanol functionality, while Group II requires that there be no silanol functionality. This, therefore, represents different special technical features even though applicants derive one functional group containing polymer from the other. The restriction is, therefore, maintained.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit 1713

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kusakabe et al., European EP 0789036.

Reference to Kusakabe et al. specifically teaches applicants' claimed polymers with terminal silanol functionality. This can be seen clearly in the reference in the disclosure on pages 12-14. Although the reference makes his polymers in somewhat different chemical reaction, the polymers themselves are the same as those being claimed by applicants or would have the same features absent evidence of structural difference, In re Fitzgerald et al., 205 USPQ 594, and commensurate in scope to the claims. The reference further teaches curable compositions with these polymers. Applicants' claimed polymers and compositions are, therefore, properly rejected under 35 U.S.C. § 102 or 103 over reference to Kusakabe et al.
